-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's statement of the prior art in view of Burns et al (6654512). The applicant has described the light controlling element and specifically with respect LiNbO_3 , and that there is DC drift that is due to long term diffusion problems. Burns et al disclose in col. 5, lines 14-47 a similar system which uses a buffer layer to have long term temporal signal stability of the system, and this is equivalent to applicant's claimed anti-DC drift layer, and one would be motivated to use Burns et al layer because it gives long term temporal stability to the signal in the system. The thickness of the layer is also address and is in the range covered by Burns et al.

3. Claims 2-4, 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter:
The claimed invention of forming the anti-drift layer by doping anti-drift material from the base plate is not shown or suggested by the prior art.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference RE37809 in col. 20, lines 51-54 discusses the drift problem and

Art Unit: 2873

suggests in-diffusion of MgO. References 6198855 and 2003/0133638 discuss the diffusion and drift problem and the use buffer layers.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Hanig whose telephone number is 571-272-2329. The examiner can normally be reached on M-F: 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Epps can be reached on 571-272-2328. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
